

WHAT IS CLAIMED IS:

1. An optical fiber link module comprising:
5 a die carrier having a generally planar edge;
at least one optical die disposed on the edge of the die carrier;
an input/output connector half having a generally planar surface
disposed perpendicularly to the edge of the die carrier, the input/output connector
half surface having an input/output connection; and
10 a circuit cable connected between the optical die and the
input/output connection.

2. The optical fiber link module of claim 1 wherein the die carrier
comprises a ceramic.
15

3. The optical fiber link module of claim 1 wherein the die carrier
comprises aluminum nitride.

4. The optical fiber link module of claim 1 wherein the die carrier
comprises an aluminum nitride ceramic.
20

5. The optical fiber link module of claim 1 wherein the optical die
comprises a laser.

25 6. The optical fiber link module of claim 1 wherein the optical die
comprises a photodetector.

7. The optical fiber link module of claim 1 further comprising an upper fiber connector portion and a lower fiber connector portion connected to the die carrier, the upper and lower fiber connector portions being adapted to receive an optical fiber.

8. The optical fiber link module of claim 7 wherein the upper fiber connector portion includes at least one fastener accepting hole.

9. The optical fiber link module of claim 7 wherein the lower connection portion includes at least one fastener accepting hole.

10. An optical fiber link module comprising:
a die carrier having a generally planar edge;
a multiple array lens disposed on the edge of the die carrier;
an input/output connector half having a generally planar surface disposed perpendicularly to the edge of the die carrier, the input/output connector half surface having an input/output connection; and
a circuit cable connected between the multiple array lens and the input/output connection.

11. The optical fiber link module of claim 10 wherein the die carrier comprises a ceramic.

12. The optical fiber link module of claim 10 wherein the die carrier comprises aluminum nitride.

13. The optical fiber link module of claim 10 wherein the die carrier comprises an aluminum nitride ceramic.

5 14. The optical fiber link module of claim 10 wherein the multiple array comprises a laser.

15. The optical fiber link module of claim 10 wherein the multiple array comprises a photodetector.

10

16. The optical fiber link module of claim 10 further comprising an upper fiber connector portion and a lower fiber connector portion connected to the die carrier, the upper and lower fiber connector portions being adapted to receive an optical fiber.

15

17. The optical fiber link module of claim 16 wherein the upper fiber connector portion includes at least one fastener accepting hole.

18. The optical fiber link module of claim 16 wherein the lower
20 connection portion includes at least one fastener accepting hole.

Patent Application No. AUS920010763US1

19. An optical fiber link module comprising:
- an optical fiber;
 - a ceramic die carrier having a generally planar edge;
 - 5 a multiple array lens disposed on the edge of the die carrier, the multiple array including at least one laser and at least one photodetector;
 - an input/output connector half having a generally planar surface disposed perpendicularly to the edge of the die carrier, the input/output connector half surface having an input/output connection;
 - 10 a circuit cable connected between the multiple array lens and the input/output connection; and
 - an upper fiber connector portion and a lower fiber connector portion connected to the die carrier, the upper and lower fiber connector portions being adapted to receive an optical fiber.
- 15
20. The optical fiber link module of claim 19 wherein the upper fiber connector portion and the lower fiber connector portion each includes at least one fastener accepting hole.
